Flow Sensing Principle

■ Thermal Mass Flow Sensing

**KC-2600 Series
Thermal Mass Sensor**

Golden Rule Co., Ltd.'s unique Mass Flow probe guarantees excellent accuracy, robustness and reliability of industrial flowmeters. The mass flow sensor consists of two sensing parts, one is a flow sensor and the other is a temperature sensor that automatically compensates for changes in gas temperature. The new device consists of two temperature platinum resistors on a single chip. A high ohm resistor is used to measure the reference temperature, while a low ohm resistor is used as a heater. By using the bridge circuit, the different resistance values of the two elements generate different self-heating. Self-heating depends on the supply voltage, mass flow and the medium in which the sensor is placed. A higher voltage increases self-heating, and a higher flow rate increases cooling. If self-heating is continuously maintained by a suitable controller, the voltage will be increased with a high flow rate so that the mass flow can be measured.

Description

Golden Rules' KC-2600GI Series Smart inline mass flowmeter accommodates the change measurement requirements and instrument-validation demands of fluid flow monitoring installations.

The versatile microprocessor-based transmitter integrates the function of flow measurement, flow-range adjustment, meter validation and diagnostics, in either a probe-mounted or remote housing.

Mass flow rate and totalized flow, as well as other configuration variables are displayed on the meter's optional 2X16 LCD panel. The programmable transmitter is easily configured via an RS-485 communication port and Golden Rules Smart interface software, or via the display and magnetic switches in the instrument panel.

The Golden Rules KC-2600GI Series allows you to configure or change the following parameters: flow range, totalize, time response, low flow cutoff and a calibration correction factor that compensates for flow profile flow variations. Golden Rules's Smart interface software guides you through a procedure to fully validate instrument performance. The meter is available with variety of input signal, mounting and packaging option.

Description

Golden Rules' KC-2600BI Series Smart inline mass flowmeter accommodates the change measurement requirements and instrument-validation demands of fluid flow monitoring installations.

The versatile microprocessor-based transmitter integrates the function of flow measurement, flow-range adjustment, meter validation and diagnostics, in either a probe-mounted or remote housing.

Mass flow rate and totalized flow, as well as other configuration variables are displayed on the meter's optional 2X16 LCD panel. The programmable transmitter is easily configured via an RS-485 communication port and Golden Rules Smart interface software, or via the display and magnetic switches in the instrument panel.

The Golden Rules KC-2600BI Series allows you to configure or change the following parameters: flow range, totalize, time response, low flow cutoff and a calibration correction factor that compensates for flow profile flow variations. Golden Rules's Smart interface software guides you through a procedure to fully validate instrument performance. The meter is available with variety of input signal, mounting and packaging option.
